Magistrate Wizard

Architecture as implemented (migrations 0001–0067)

Court-anchored Docket · no admin bypass into private judicial content

13 August 2026

o. How to read these guides

What Magistrate Wizard is

Magistrate Wizard is a computer filing system for magistrates. It holds:

- the **Court's docket** (the list of matters before that Court)
- **your** written work (judgments, research notes, shortcuts)
- a **shared law library** (published case law and legislation)

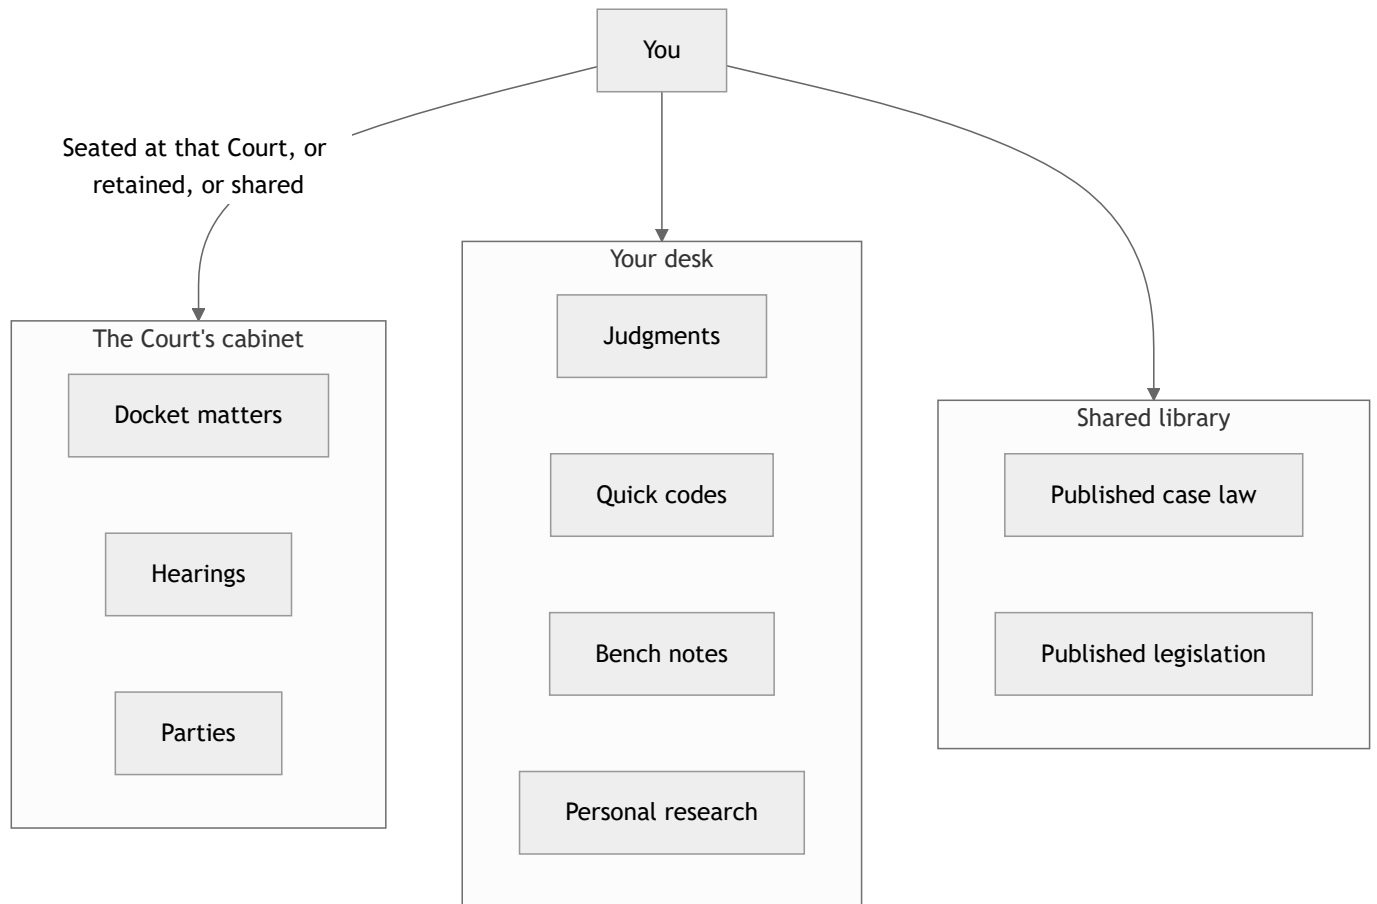

It is not a public website. Members of the public cannot browse it. Every screen you open has already been filtered so you only see what you are allowed to see.

Words used here

Word	Everyday meaning in Magistrate Wizard
Court	A physical Guyana Magistrates' Court (for example, a sitting at a named location). Not the Caribbean Court of Justice as a reported authority.
District	The Magisterial District that Court belongs to. Case numbers are unique <i>inside a district</i> , not nationwide.
Docket matter	One case file on that Court's list. Arraignment, maintenance, traffic — all are "matters".
Event	One listed appearance or hearing date for that matter.
Retained / part-heard	You kept access to one matter after you stopped sitting that Court, so you can finish it.
Share	You let a <i>named colleague</i> see one matter. Exceptional, not the normal way work moves on.
Canonical case law	An entry in the official library, published by an administrator. Everyone signed in can read it.
Personal case law	Your own research card. Private unless you mark it discoverable.
Discoverable	Others may <i>read</i> . They still cannot edit. Used for judgments and personal case law — never for the docket.
Admin	Someone who seats magistrates at Courts and publishes the library. Admin is not a master key to other people's private writing.

What these guides are not

They are not the architecture specification. They do not replace training on the law. They describe **how the software behaves today**.
